                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention comprises a library of fusion nucleic acids, where each encoded protein contains a scaffold protein (e.g. a green fluorescent protein - GFP) and a library peptide sequence comprising an alpha helical biasing sequence, or a scaffold protein, a library peptide and a nucleating sequence. The library of the invention is useful for screening bioactive peptides conferring a particular phenotype. The present amino acid sequence represents a scaffold protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention comprises a library of fusion nucleic acids, where each encoded protein contains a scaffold protein (e.g. a green fluorescent protein - GFP) and a library peptide sequence comprising an alpha helical biasing sequence, or a scaffold protein, a library peptide and a nucleating sequence. The library of the invention is useful for screening bioactive peptides conferring a particular phenotype. The present amino acid sequence represents a library protein containing a nucleating
The invention describes a library (I) of fusion nucleic acids, where endusion nucleic acid comprises a first nucleic acid (NI), encoding a scaffold protein sequence; and a second nucleic acid (NI), encoding a library peptide sequence comprising an alpha helical biasing sequence; where NI is fused to NI. Disclosed is a method for screening bioactive peptides conferring a change in specific phenotype such as cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       phenotype change; cell morphology; cell growth; cell viability; cell adhesion; cellular density; cancer; tumour; apoptosis; cell death; loss of cell division; decreased cell growth; brca-1; brca-2; tumour suppressor gene; breast cancer; adenomatous polyposis coli; APC; brosophila discs-large; DIG; cardiovascular; neurobiology; bone biology; skin biology; cosmeccutical; endocrinology; infectious disease; drug toxicity; drug resistance; inflammation; allergic response;
                                                                                                                                                                                                                                                                                           Novel library of fusion nucleic acids each of which has fused first and second nucleic acids encoding scaffold protein and library peptide having alpha helical biasing sequence, respectively, useful in screening
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Structurally biased random peptide library scaffold protein seqid

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  with which the bioactive peptide interacts. The peptide(s) can be combined with other pharmacologic activators to study the epistatic relationships of signal transduction pathways in question. The disclosed method is also useful in cancer applications. Random libraries can be controlled into any tumour cell (primary or cultured), and peptides indentified which by themselves induce apoptosis, cell death, loss of cell division or decreased cell growth. The method is also useful for screening of bioactive peptides which restore the constitutive function of the brca-1 or brca-2 genes, and other tumour suppressor genes important in breast cancer such as the adenomatous polyposis coli gene (APC) and the Drosophila discs-large gene (DIg), which are components of cell-cell junctions. The methods are useful in cardiovascular cell-cell-cell junctions, cosmeccutical applications, endocrinology applications, cosmeccutical applications, drug toxicities and drug resistance applications, immunobiology, inflammation, and allergic response annibations, and biorechnology applications, and biorechnology applications.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    response applications, and biotechnology applications. The peptide library can easily be monitored, both for its presence within cells and its quantity. The expression of structurally biased libraries generate elevated cellular concentration of peptides having a given structural bias and thus increase the hit rate for targets that bind such structures. This is the amino acid sequence of a scaffold protein used in peptide libraries of hold the library peptide in a conformationally
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        cells,

CC morphology, cell growth, cell viability, adhesion to substrates or other CC cells, and cellular density; changes in the expression of one or more CC RNAs, proteins, lipids, hormones, cytokines, or other molecules; changes CC in the equilibrium state (i.e., half-life) or one or more RNAs, protein, CC lipids, hormones, cytokines, or other molecules; etc. The bioactive CC peptide identified by above mentioned method is used to generate more CC candidate peptides and to identify target molecules, i.e., the molecules (can be combined with other pharmacologic activators to study the epistatic CC relationships of signal transduction pathways in question. The disclosed CC introduced into any tumour cell (primary or cultured), and peptides (cidentified which by themselves induce apoptosis, cell death, loss of cell division or decreased cell growth. The method is also useful for screening of bioactive peptides which restore the constitutive function CC of the brca-1 or brca-2 genes, and other tumour suppressor genes CC (APC) and the Drosophila discs-large gene (DIg), which are components of coll-cell junctions. The methods are useful in cardiovascular applications are useful in Cardiovascular applications.
                                           applications, neurobiology applications, bone biology applications, skin biology applications, cosmeceutical applications, endocrinology applications, infectious disease applications, drug toxicities and drug resistance applications, immunobiology, inflammation, and allergic response applications, and biotechnology applications. The peptide library can easily be monitored, both for its presence within cells and its quantity. The expression of structurally biased libraries generate elevated cellular concentration of peptides having a given structural bias and thus increase the hit rate for targets that bind such structures. This is the amino acid sequence of a protein associated with fused nucleic acid and random peptide libraries of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel library of fusion nucleic acids each of which has fused first and second nucleic acids encoding scaffold protein and library peptide having alpha helical biasing sequence, respectively, useful in screening
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        peptides conferring a change in specific phenotype such as cel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        scaffold protein sequence; and a second nucleic acid (N2), encoding a library peptide sequence comprising an alpha helical biasing sequence; where N1 is fused to N2. Disclosed is a method for screening bioactive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Example 6; SEQ ID NO 41; 110pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention comprises a library of fusion nucleic acids, where each encoded protein contains a scaffold protein (e.g. a green fluorescent protein - GFP) and a library peptide sequence comprising an alpha helical biasing sequence, or a scaffold protein, a library peptide and a nucleating sequence. The library of the invention is useful for screening bioactive peptides conferring a particular phenotype. The present amino acid sequence represents a scaffold protein.
                                                                                                                                              fusion nucleic acid library; fusion protein library; scaffold protein; green fluorescent protein; GFP; alpha helical biasing sequence; nucleating sequence; screening.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Library of fusion polypeptides in which each polypeptides comprises scaffold protein and library peptide having alpha helical biasing sequence, or scaffold protein, library peptide and nucleating sequence.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention comprises a library of fusion nucleic acids, where each encoded protein contains a scaffold protein (e.g. a green fluorescent protein - GFP) and a library peptide sequence comprising an alpha helical biasing sequence, or a scaffold protein, a library peptide and a nucleating sequence. The library of the invention is useful for screening bioactive peptides conferring a particular phenotype. The present amino acid sequence represents a library protein containing a nucleating

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CC peptides conferring a change in specific phenotype such as cell morphology, cell growth, cell viability, adhesion to substrates or other CC cells, and cellular density; changes in the expression of one or more CC RNAs, proteins, lipids, hormones, cytokines, or other molecules; changes in the expression of one or more CC RNAs, proteins, cytokines, or other molecules; changes in the equilibrium state (i.e., half-life) or one or more RNAs, protein, CC lipids, hormones, cytokines, or other molecules; changes in the equilibrium state (i.e., half-life) or one or more RNAs, protein, CC candidate peptides and to identify target molecules, i.e., the molecules can the constitution of the molecules, i.e., the molecules with which the bloactive peptide interacts. The peptide (s) can be CC combined with other pharmacologic activators to study the epistatic CC method is also useful in cancer applications. Random libraries can be introduced into any tumour cell (primary or cultured), and peptides controduced into any tumour cell (primary or cultured), and peptides controduced into any tumour cell (primary or cultured), and peptides controduced which by themselves induce apoptosis, cell death, loss of cell division or decreased cell growth. The method is also useful for CC screening of bloactive peptides which restore the constitutive function confections in breast cancer such as the adenomatous polyposis coli gene CC important in breast cancer such as the adenomatous polyposis coli gene CC call-cell junctions. The methods are useful in cardiovascular of cell-cell-cell junctions. The methods are useful in cardiovascular skin CC applications, infectious disease applications, endotrinology applications, and allergic crestorse applications, and biotechnology applications. The peptides conference conference applications, and biotechnology applications. The peptides conference

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         response applications, and biotechnology applications. The peptide library can easily be monitored, both for its presence within cells and its quantity. The expression of structurally biased libraries generate elevated cellular concentration of peptides having a given structural bias and thus increase the hit rate for targets that bind such structures. This is the amino acid sequence of a scaffold protein used peptide libraries ot hold the library peptide in a conformationally
                                                                                                                                                                                                                                                                      Structurally biased random peptide library related protein seqid 55
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           scaffold protein sequence; and a second nucleic acid (N2), encoding a library peptide sequence comprising an alpha helical biasing sequence; where N1 is fused to N2. Disclosed is a method for screening bioactive

peptides conferring a change in specific phenotype such as cell composition, cell growth, cell viability, adhesion to substrates or other cells, and cellular density; changes in the expression of one or more CC enlis, and cellular density; changes in the expression of one or more CC in the equilibrium state (i.e., half-life) or one or more RNAs, protein, clipids, hormones, cytokines, or other molecules; ctc. The blocative peptide identified by above mentioned method is used to generate more CC candidate peptides and to identify target molecules, i.e., the molecules ctc. The blocative peptide interacts The peptide(s) can be cc. with which the blocative peptide interacts The peptide(s) can be cc. with which the blocative peptide interacts The peptide(s) can be cc. and the combined with other pharmacologic activators to study the epistatic crelationships of signal transduction pathways in question. The disclosed controduced into any tumour cell (primary or cultured), and peptides clidentified which by themselves induce applications. Random libraries can be cc. identified which by themselves induce apoptosis, cell death, loss of cell division or decreased cell growth. The method is also useful for screening of blocative peptides which restore the constitutive function confined the Drosophila discs-large gene (DIg), which are components of coll-cell junctions. The methods are useful in cardiovascular applications beneful in cardiovascular and cardiovascular applications beneful in cardiovascular and cardiovascular applications beneful in cardiovascular and cardiovascular applications.
                                            response applications, and biotechnology applications. The peptide library can easily be monitored, both for its presence within cells and its quantity. The expression of structurally biased libraries generate elevated cellular concentration of peptides having a given structural bias and thus increase the hit rate for targets that bind such structures. This is the amino acid sequence of a protein associated with fused nucleic acid and random peptide libraries of the invention.
                                                                                                                                                                                                                                   applications, neurobiology applications, bone biology applications, skin biology applications, cosmeceutical applications, endocrinology applications, infectious disease applications, drug toxicities and drug resistance applications, immunobiology, inflammation, and allergic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 scaffold protein sequence; and a second nucleic acid (N2), er library peptide sequence comprising an alpha helical biasing where N1 is fused to N2. Disclosed is a method for screening
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel library of fusion nucleic acids each of which has fused first and second nucleic acids encoding scaffold protein and library peptide having alpha helical biasing sequence, respectively, useful in screening
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    08-OCT-1998;
08-OCT-1999;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention describes a library (I) of fusion nucleic acids, where each fusion nucleic acid comprises a first nucleic acid (NI), encoding a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Example 6;

The library of the invention is useful for screening bioactive peptides conferring a particular phenotype. The present amino acid sequence represents a scaffold protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Library of fusion polypeptides in which each polypeptides comprises scaffold protein and library peptide having alpha helical biasing sequence, or scaffold protein, library peptide and nucleating sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                (ANDE/)

Novel library of fusion nucleic acids each of which has fused first and second nucleic acids encoding scaffold protein and library peptide having alpha helical biasing sequence, respectively, useful in screening

Example 6; SEQ ID NO 54; 110pp; English

CC peptides conferring a change in specific phenotype such as cell growth, cell viability, adhesion to substrates or other cells, and cellular density; changes in the expression of one or more CC enls, and cellular density; changes in the expression of one or more CC lipids, hormones, lipids, hormones, or other molecules; changes in the equilibrium state (i.e., half-life) or one or more RNAs, protein, CC lipids, hormones, cytokines, or other molecules; changes in the equilibrium state (i.e., half-life) or one or more RNAs, protein, CC lipids, hormones, cytokines, or other molecules, i.e., the bioactive peptide identify target molecules, i.e., the molecules with which the bioactive peptide interacts. The peptide(s) can be combined with other pharmacologic activators to study the epistatic combined with other pharmacologic activators to study the epistatic combined with other pharmacologic activators to study the epistatic combined with other pharmacologic activators to study the epistatic combined with other pharmacologic activators to study the epistatic combined with other pharmacologic activators to study the epistatic combined combined with other pharmacologic activators. Random libraries can be constituted into any tumour cell (primary or cultured), and peptides can be conscitutive peptides which restore the conscitutive function conference of the broa-1 or broa-2 genes, and other tumour suppressor genes conscitutive functions. The methods are useful in cardiovascular components of cell-cell junctions, cosmeceutical applications, and altergic resistance applications, immunoblology, inflammation, and altergic corresponse applications, and biotechnology applications. The peptide response applications, and biotechnology applications. The peptide library can easily be monitored, both for its presence within cells and its quantity. The expression of structurally biased libraries generate elevated cellular concentration of peptides having a given structural bias and thus increase the hit rate for targets that bind such structures. This is the amino acid sequence of a protein associated with fused nucleic acid and random peptide libraries of the invention. scaffold protein sequence; and a second nucleic acid (N2), encoding a library peptide sequence comprising an alpha helical biasing sequence; where N1 is fused to N2. Disclosed is a method for screening bioactive The invention describes a library (I) of fusion nucleic acids, where each fusion nucleic acid comprises a first nucleic acid (NI), encoding a (N2),

                                                                                                                                                                                                                                                      The invention comprises a library of fusion nucleic acids, where each encoded protein contains a scaffold protein (e.g. a green fluorescent protein - GFP) and a library peptide sequence comprising an alpha helical biasing sequence, or a scaffold protein, a library peptide and a nuclearing sequence. The library of the invention is useful for screening bioactive peptides conferring a particular phenotype. The present amino acid sequence represents a library protein containing a nucleating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Library of fusion polypeptides in which each polypeptides comprises scaffold protein and library peptide having alpha helical biasing sequence, or scaffold protein, library peptide and nucleating sequence:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   (ANDE/)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            green fluorescent

The library of the invention is useful for screening bioactive peptides conferring a particular phenotype. The present amino acid sequence represents a scaffold protein.
                                                                                                                                                                                                                                                                                                                                                               Sequence 67
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Library of fusion polypeptides in which each polypeptides comprises scaffold protein and library peptide having alpha helical biasing sequence, or scaffold protein, library peptide and nucleating sequence.

comorphology, cell growth, cell viability, adhesion to substrates or other cells, and cellular density; changes in the expression of one or more CRNAs, proteins, lipids, hormones, cytokines, or other molecules; changes in the equilibrium state (i.e., half-life) or one or more RNAs, protein, Clipids, hormones, cytokines, or other molecules; etc. The bicactive peptide identified by above mentioned method is used to generate more condidate peptides and to identify target molecules, i.e., the molecules cubic with which the bicactive peptide interacts. The peptide(s) can be combined with other pharmacologic activators to study the epistatic combined with other pharmacologic activators to study the epistatic concluded into any tumour cell (primary or cultured), and peptides confirmed interded into any tumour cell (primary or cultured), and peptides cidentified which by themselves induce apoptosis, cell death, loss of cell civision or decreased cell growth. The method is also useful for correction of the broa-1 or broa-2 genes, and other tumour suppressor genes confirmed that breast cancer such as the adenomatous polyposis coli gene (APC) and the Drosophila discs-large gene (DIg), which are components of cell-cell-cell junctions. The methods are useful in cardiovascular
applications, infectious disease applications, drug toxicities and drug resistance applications, immunobiology, inflammation, and allergic response applications, and biotechnology applications. The peptide library can easily be monitored, both for its presence within cells and its quantity. The expression of structurally biased libraries generate elevated cellular concentration of peptides having a given structural bias and thus increase the hit rate for targets that bind such structures. This is the amino acid sequence of a scaffold protein used in peptide libraries ot hold the library peptide in a conformationally
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel library of fusion nucleic acids each of which has fused first second nucleic acids encoding scaffold protein and library peptide lalpha helical biasing sequence, respectively, useful in screening
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          drug toxicity; drug resistance; inflammation; allergic response; scaffold protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention describes a library (I) of fusion nucleic acids, where each fusion nucleic acid comprises a first nucleic acid (N1), encoding a scaffold protein sequence; and a second nucleic acid (N2), encoding a library peptide sequence comprising an alpha helical biasing sequence; where N1 is fused to N2. Disclosed is a method for screening bloactive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            08-OCT-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            맑
                                                      CC scaffold protein sequence; and a second nucleic acid (N2), encoding a combinary peptide sequence comprising an alpha helical biasing sequence; CC where N1 is fused to N2. Disclosed is a method for screening bloactive peptides conferring a change in specific phenotype such as cell cells, and cellular density; changes in the expression of one or more CC cells, and cellular density; changes in the expression of one or more CC RNAs, proteins, lipids, hormones, cytokines, or other molecules; changes in the equilibrium state (i.e., half-life) or one or more RNAs, protein, clipids, hormones, cytokines, or other molecules; changes CC in the equilibrium state (i.e., half-life) or one or more RNAs, protein, clipids, hormones, cytokines, or other molecules; changes CC inpids hormones, cytokines, or other molecules; cetc. The bioactive combined with other pharmacologic activators to study the epistatic combined with other pharmacologic activators to study the epistatic crelationships of signal transduction pathways in question. The disclosed combined which by themselves induce apoptosis, cell death, loss of cell civision or decreased cell growth. The method is also useful for content in breast cancer such as the adenomatous polyposis coli gene components of cell-cell junctions. The methods are useful in cardiovascular coliportant in breast cancer such as the adenomatous polyposis coli gene cancer such as the adenomatous polyposis coli gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             phenotype change; cell morphology; cell growth; cell viability; cell adhesion; cellular density; cancer; tumour; apoptosis; cell death; loss of cell division; decreased cell growth; brca-2; trooperessor gene; breast cancer; adenomatous polyposis coli; APC; prosophila discs-large; DIG; cardiovascular; neurobiology; bone biology; skin biology; cosmecceutical; endocrinology; infectious disease; drug toxicity; drug resistance; inflammation; allergic response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention describes a library (1) of fusion nucleic acids, where each fusion nucleic acid comprises a first nucleic acid (N1), encoding a scaffold protein sequence; and a second nucleic acid (N2), encoding a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel library of fusion nucleic acids each of which has fused first second nucleic acids encoding scaffold protein and library peptide lalpha helical biasing sequence, respectively, useful in screening
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           29-JAN-2004

The peptide library can easily be monitored, both for its presence within cells and its quantity. The expression of structurally biased libraries generate elevated cellular concentration of peptides having a given structural bias and thus increase the hit rate for targets that bind such structures. This is the amino acid sequence of a protein associated with fused nucleic acid and random peptide libraries of the invention.
                            The invention comprises a library of fusion nucleic acids, where each encoded protein contains a scaffold protein (e.g. a green fluorescent protein - GFP) and a library peptide sequence comprising an alpha helical biasing sequence, or a scaffold protein, a library peptide and a nucleating sequence. The library of the invention is useful for screening bioactive peptides conferring a particular phenotype. The present amino acid sequence represents a scaffold protein.
                                                                                                                                                                                                                                                                                                                                                                                        08-OCT-1998;

The library of the invention is useful for screening bioactive peptides conferring a particular phenotype. The present amino acid sequence represents a library protein containing a nucleating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             fusion nucleic acid library; fusion protein library; scaffold protein; green fluorescent protein; GFP; alpha helical biasing sequence; nucleating sequence; screening.
                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 75
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Library of fusion polypeptides in which each polypeptides comprises scaffold protein and library peptide having alpha helical biasing sequence, or scaffold protein, library peptide and nucleating sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               (ANDE/)

peptides conferring a change in specific phenotype such as cell morphology, cell growth, cell viability, adhesion to substrates or other cells, and cellular density; changes in the expression of one or more RNAs, proteins, lipids, hormones, cytokines, or other molecules; changes in the equilibrium state (i.e., half-life) or one or more RNAs, protein, lipids, hormones, cytokines, or other molecules; changes in the equilibrium state (i.e., half-life) or one or more RNAs, protein, lipids, hormones, cytokines, or other molecules; etc. The bioactive peptide identified by above mentioned method is used to generate more candidate peptides and to identify target molecules, i.e., the molecules with which the bioactive peptide interacts. The peptide (a) can be combined with other pharmacologic activators to study the epistatic relationships of signal transduction pathways in question. The disclosed method is also useful in cancer applications. Random libraries can be introduced into any timour cell (primary or cultured), and spetides identified which by themselves induce apoptosis, cell death, loss of cell division or decreased cell growth. The method is also useful for screening of bioactive peptides which restore the constitutive function of the broar-love peptides which restore the constitutive function and the broar-love peptides which restore the constitutive function of the broar-love peptides which restore the constitutive function and the broar-love peptides which as the adenomatous polyposis coli gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 fusion nucleic acid library; scaffold protein; bioactive peptide; phenotype change; cell morphology; cell growth; cell viability; cell adhesion;                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           31-JUL-2003
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Structurally biased

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               (first

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     SSXS
                      fusion nucleic acid comprises a first nucleic acid (NI), encoding a coaffold protein sequence; and a second nucleic acid (N2), encoding a clibrary peptide sequence comprising an alpha helical biasing sequence; where NI is fused to N2. Disclosed is a method for screening bioactive peptides conferring a change in specific phenotype such as cell comprising a period of the substrates or other cells, and cellular density; changes in the expression of one or more CC RNAs, proteins, lipids, hormones, cytokines, or other molecules; changes in the equilibrium state (i.e., half-life) or one or more RNAs, protein, lipids, hormones, cytokines, or other molecules; etc. The bioactive peptide identified by above mentioned method is used to generate more candidate peptides and to identify target molecules; i.e., the molecules with which the bioactive peptide interacts. The peptide(s) can be combined with other pharmacologic activators to study the epistatic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches

The peptide library can easily be monitored, both for its presence within cells and its quantity. The expression of structurally biased libraries generate elevated cellular concentration of peptides having a given structural bias and thus increase the hit rate for targets that bind such structures. This is the amino acid sequence of a protein associated with fused nucleic acid and random peptide libraries of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          method is also useful in cancer applications. Random libraries can be introduced into any tumour cell (primary or cultured), and peptides identified which by themselves induce apoptosis, cell death, loss of celdivision or decreased cell growth. The method is also useful for screening of bloactive peptides which restore the constitutive function of the brca-1 or brca-2 genes, and other tumour suppressor genes important in breast cancer such as the adenostous polyposis coli gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               nucleating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           fusion nucleic acid library; fusion protein library; scaffold protein; green fluorescent protein; GFP; alpha helical biasing sequence;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    06-MAY-2004
                                                                                                             Library of fusion polypeptides in which each polypeptides comprises scaffold protein and library peptide having alpha helical biasing sequence, or scaffold protein, library peptide and nucleating sequence.
                                                                                                                                                                                                                                           WPI; 2004-033956/03

                                      The invention comprises a library of fusion nucleic acids, where each encoded protein contains a scaffold protein (e.g. a green fluorescent protein - GFP) and a library peptide sequence comprising an alpha helical biasing sequence, or a scaffold protein, a library peptide and a nucleating sequence. The library of the invention is useful for screening bioactive peptides conferring a particular phenotype. The present amino acid sequence represents a library protein containing a nucleating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         protein - GPP) and a library poptide sequence comprising an alpha helical biasing sequence, or a scatfold protein, a library peptide and a nucleating sequence. The library of the invention is useful for screening bioactive peptides conferring a particular phenotype. The present amino acid sequence represents a scaffold protein.
                                                                                                                                                                                                                                                                                                                                                       08-OCT-1998; 98US-00169015.

                                                                                                                                                                            CC fusion nucleic acid comprises a first nucleic acid (N1), encoding a CC scaffold protein sequence; and a second nucleic acid (N2), encoding a CC library peptide sequence comprising an alpha helical biasing sequence; where N1 is fused to N2. Disclosed is a method for screening bioactive peptides conferring a change in specific phenotype such as cell cc morphology, cell growth, cell viability, adhesion to substrates or other cells, and cellular density; changes in the expression of one or more CC in the equilibrium state (i.e., half-life) or one or more RNAs, protein, lipids, hormones, cytokines, or other molecules; changes cin the equilibrium state (i.e., half-life) or one or more RNAs, protein, clipids, hormones, cytokines, or other molecules; etc. The bioactive peptide identified by above mentioned method is used to generate more CC candidate peptides and to identify target molecules, i.e., the molecules combined with other pharmacologic activators to study the epistatic crelationships of signal transduction pathways in question. The disclosed controduced into any tumour cell (primary or cultured), and peptides controduced which by themselves induce apoptosis, cell death, loss of cell cidentified which by themselves induce apoptosis, cell death, loss of cell correction or decreased cell growth. The method is also useful for correction to study the epitides which restore the constitutive function constitutive function.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       rusion nucleic acid library; scaffold protein; bioactive peptide; phenotype change; cell morphology; cell growth; cell viability; cell adhesion; cellular density; cancer; tumour; apoptosis; cell death; loss of cell division; decreased cell growth; brca-1; brca-2; rumour sumpressor cans.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel library of fusion nucleic acids each of which has fused first second nucleic acids encoding scaffold protein and library peptide I
                                    screening of bioactive peptides which restore the constitutive find the brca-1 or brca-2 genes, and other tumour suppressor genes important in breast cancer such as the adenomatous polyposis col: (APC) and the Drosophila discs-large gene (DIg), which are componed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   second nucleic acids encoding scaffold protein and library peptide alpha helical biasing sequence, respectively, useful in screening
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             08-OCT-1998;

The peptide library can easily be monitored, both for its presence within cells and its quantity. The expression of structurally biased libraries generate elevated cellular concentration of peptides having a given structural bias and thus increase the hit rate for targets that bind such structures. This is the amino acid sequence of a protein associated with fused nucleic acid and random peptide libraries of the invention.

Novel library of fusion nucleic acids each of which has fused first and second nucleic acids encoding scaffold protein and library peptide having alpha helical biasing sequence, respectively, useful in screening

scaffold protein sequence; and a second nucleic acid (N2), encoding a library peptide sequence comprising an alpha helical biasing sequence; where N1 is fused to N2. Disclosed is a method for screening bioactive

conferring a change in specific

phenotype such as

The invention describes a library (I) of fusion nucleic acids, where each fusion nucleic acid comprises a first nucleic acid (N1), encoding a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CC cells, and cellular density; changes in the expression of one or more CC RNAs, proteins, lipids, hormones, cytokines, or other molecules; changes in the equilibrium state (i.e., half-life) or one or more RNAs, protein, CC lipids, hormones, cytokines, or other molecules; etc. The bioactive peptide identified by above mentioned method is used to generate more CC candidate peptides and to identify target molecules, i.e., the molecules candidate peptides and to identify target molecules, i.e., the molecules combined with other pharmacologic activators to study the epistatic crelationships of signal transduction pathways in question. The disclosed comethod is also useful in cancer applications. Random libraries can be introduced into any tumour cell (primary or cultured), and peptides contentified which by themselves induce apoptosis, cell death, loss of cell division or decreased cell growth. The method is also useful for CC division or broa-2 genes, and other tumour suppressor genes CC important in breast cancer such as the adenomatous polyposis coli gene CC important in breast cancer such as the adenomatous polyposis coli gene CC applications, neurobiology applications, bone biology applications, skin CC applications, infectious disease applications, bone biology applications, skin CC applications, and biotechnology applications, and allergic cresistance applications, and biotechnology applications. The peptide CC library can easily be monitored, both for its presence within cells and CC elevated cellular concentration of structurally biased libraries generate CC elevated cellular concentration of peptides having a given structural CC bias and thus increase the hit rate for targets that bind such concentration acid sequence of a scaffold protein used in centracted bias and thus increase the hit rate for targets that bind such concentrations are periode in a conformationally cc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

밁 Ś

encoded protein biasing

Example

6; SEQ ID NO 49; 110pp; English

The invention comprises a library of fusion nucleic acids, where each encoded protein contains a scaffold protein (e.g. a green fluorescent protein - GFP) and a library peptide sequence comprising an alpha hel biasing sequence, or a scaffold protein, a library peptide and a

helical

The library of the invention is useful for screening bloactive peptides conferring a particular phenotype. The present amino acid sequence represents a scaffold protein.

          fusion nucleic acid comprises a first nucleic acid (N1), encoding a scaffold protein sequence; and a second nucleic acid (N2), encoding a library peptide sequence comprising an alpha helical biasing sequence; where N1 is fused to N2. Disclosed is a method for screening bioactive peptides conferring a change in specific phenotype such as cell morphology, cell growth, cell viability, adhesion to substrates or other cells, and cellular density; changes in the expression of one or more RNAs, proteins, lipids, hormones, cytokines, or other molecules; changes in the equilibrium state (i.e., half-life) or one or more RNAs, protein, lipids, hormones, cytokines, or other molecules; changes in the equilibrium state (i.e., half-life) or one or more RNAs, protein, lipids, hormones, cytokines, or other molecules; etc. The bloactive peptide identified by above mentioned method is used to generate more
                                                                                                                                                                                                                                                                                                                       Novel library of fusion nucleic acids each of which has fused first second nucleic acids encoding scaffold protein and library peptide lalpha helical biasing sequence, respectively, useful in screening
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         08-OCT-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                with which the bioactive peptide interacts. The peptide(s) can be combined with other pharmacologic activators to study the epistatic relationships of signal transduction pathways in question. The disclosed method is also useful in cancer applications. Random libraries can be introduced into any tumour cell (primary or cultured), and peptides identified which by themselves induce apoptosis, cell death, loss of cell division or decreased cell growth. The method is also useful for screening of bioactive peptides which restore the constitutive function of the broa-1 or broa-2 genes, and other tumour suppressor genes important in breast cancer such as the adenomatous polyposis coll gene (APC) and the Drosophila discs-large gene (DIg), which are components of cell-cell junctions. The methods are useful in cardiovascular
                                                                                                                                                                                                                                                       response applications, and biotechnology applications. The peptide library can easily be monitored, both for its presence within cells and its quantity. The expression of structurally biased libraries generate elevated cellular concentration of peptides having a given structural bias and thus increase the hit rate for targets that bind such structures. This is the amino acid sequence of a scaffold protein used i peptide libraries ot hold the library peptide in a conformationally
                                                                                                                                                                                          Sequence 91

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           RNAs, proteins, lipids, hormones, cytokines, or other molecules; changes in the equilibrium state (i.e., half-life) or one or more RNAs, protein, ilpids, hormones, cytokines, or other molecules; etc. The bioactive peptide identified by above mentioned method is used to generate more candidate peptides and to identify target molecules, i.e., the molecules with which the bioactive peptide interacts. The peptide(s) can be combined with other pharmacologic activators to study the epistatic relationships of signal transduction pathways in question. The disclosed method is also useful in cancer applications. Random libraries can be introduced into any tumour cell (primary or cultured), and peptides indentified which by themselves induce apoptosis, cell death, loss of cell division or decreased cell growth. The method is also useful for screening of bioactive peptides which restore the constitutive function of the brca-1 or brca-2 genes, and other tumour suppressor genes important in breast cancer such as the adenomatous polyposis coli gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

The peptide library can easily be monitored, both for its presence within cells and its quantity. The expression of structurally biased libraries generate elevated cellular concentration of peptides having a given structural bias and thus increase the hit rate for targets that bind such fused nucleic acid and random peptide libraries of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       fusion nucleic acid comprises a first nucleic acid (N1), encoding a scaffold protein sequence; and a second nucleic acid (N2), encoding a library peptide sequence comprising an alpha helical biasing sequence; where NI is fused to N2. Disclosed is a method for screening bioactive peptides conferring a change in specific phenotype such as cell morphology, cell growth, cell viability, adhesion to substrates or other cells, and cellular density; changes in the expression of one or more cells, and cellular density; changes in the expression of one or more cells.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention comprises a library of fusion nucleic acids, where each encoded protein contains a scaffold protein (e.g. a green fluorescent protein - GFP) and a library peptide sequence comprising an alpha helical biasing sequence, or a scaffold protein, a library peptide and a nucleating sequence. The library of the invention is useful for screening bioactive peptides conferring a particular phenotype. The present amino acid sequence represents a library protein containing a nucleating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 91
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               (ANDE/)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention comprises a library of fusion nucleic acids, where each encoded protein contains a scaffold protein (e.g. a green fluorescent protein - GFP) and a library peptide sequence comprising an alpha helical biasing sequence, or a scaffold protein, a library peptide and a nucleating sequence. The library of the invention is useful for screening incleating sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             fusion nucleic acid library; scaffold protein; bioactive peptide; phenotype change; cell morphology; cell growth; cell viability; cell alhesion; cellular density; cancer; tumour; apoptosis; cell death; loss of cell division; decreased cell growth; brca-1; brca-2; tumour suppressor gene; breast cancer; adenomatous polyposis coli; APC; tumour suppressor gene; breast cancer; adenomatous polyposis coli; APC; brosophila discs-large; DIG; cardiovascular; neurobiology; bone biology; skin biology; cosmeceutical; endocrinology; infectious disease; skin biology; cosmeceutical; endocrinology; infectious disease; drug toxicity; drug resistance; inflammation; allergic response;

CC candidate peptides and to identify target molecules. i.e., the molecules (CC with which the bioactive peptide interacts. The peptide(s) can be CC combined with other pharmacologic activators to study the epistatic CC relationships of signal transduction pathways in question. The disclosed CC introduced into any tumour cell (primary or cultured), and peptides can be CC introduced into any tumour cell (primary or cultured), and peptides cC identified which by themselves induce apoptosis, cell death, loss of cell CC division or decreased cell growth. The method is also useful for CC screening of bioactive peptides which restore the constitutive function of the brca-1 or brca-2 genes, and other tumour suppressor genes (APC) and the Drosophila discs-large gene (DIg), which are components of cell-cell junctions. The methods are useful in cardiovascular cc applications, neurobiology applications, bone biology applications, skin CC biology applications, infectious disease applications, drug toxicities and drug resistance applications, immunobiology, inflammation, and allergic cresistance applications, and biotechnology applications. The peptide CC response applications, and biotechnology applications. The peptide creased cellular concentration of structurally biased libraries generate concentration of structurally biased libraries generate concentration acid sequence of a scaffold protein used in peptide libraries of hold the library peptide in a conformationally creational conformationally creations. The scaffold protein used in peptide libraries of hold the library peptide in a conformationally creational conformationally creations.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   scaffold protein sequence; and a second nucleic acid (N2), encoding a library peptide sequence comprising an alpha helical biasing sequence; where N1 is fused to N2. Disclosed is a method for screening bioactive peptides conferring a change in specific phenotype such as cell morphology, cell growth, cell viability, adhesion to substrates or other cells, and cellular density; changes in the expression of one or more RNAs, proteins, lipids, hormones, cytokines, or other molecules; changes in the equilibrium state (i.e., half-life) or one or more RNAs, protein, lipids, hormones, cytokines, or other molecules; etc. The bioactive peptide identified by above mentioned method is used to generate molecules.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Score
